

Summary Response – Reviewer 1

Manuscript: Multi-Task Deep Learning for Food Recognition and Nutrition Estimation from Food Images

No.	Reviewer Comment	Response / Action Taken	Revision Location
1	1. Reconcile the “Asian food” framing with NutritionVerse-Real, or revise the title, abstract, and framing.		
2	2. Report exact train/validation/test sizes, including image and dish counts before and after augmentation.		
3	3. Add efficiency evidence (latency, model size, parameter count), or soften “lightweight/real-time/mobile-deployable” claims.		
4	4. Benchmark F1 and R^2 against at least one prior published study.		
5	5. Replace numeric class indices on Fig. 5 with food-class names.		
6	6. Note the small test set (~25 dishes); consider cross-validation or significance testing.		
7	7. Fix the incomplete comparative sentence in Section 3.1.		
8	8. Expand the literature review and connect prior results to this study.		

Overall Response
